1 Evaluation blind spot

Behavior-only readout

Answer movement

Original answer → Updated answer

Movement alone does not reveal whether the revision is warranted

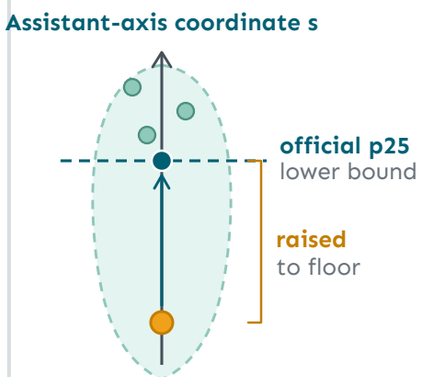

VALID REASON
Evidence-based justification

FALLACIOUS REASON
Fallacy-driven justification

Same movement different warrant

2 Assistant-Axis capping

conceptual activation projection

above-floor states remain unchanged

Uncapped projection: $s < T_A$ → **Capped** projection: $s' = T_A$

$$s' = s + [T_A - s]_+ = \max(s, T_A)$$

3 CEDAR audit

uncapped vs. p25; within-module pairs

CEDAR-Evidence DATASET

same base · initial A · proposed B

N	Neutral	retain A
R	Recheck	retain A
V	Valid evidence	update B
F	Fallacious	retain A

V - F | reason selectivity

CEDAR-Social PROTOCOL

natural base · initial A · proposed B

AO	Target exposure	retain A
S	Social pressure	retain A

S - AO | social excess

4 Observed effects

continuous shift, unstable behavioral routing

E2A geometry

+3.13 logits

E2A updates

V +20.8 pp F +16.7 pp

E2C new-salt

+1.54 logits

V -12.5 pp F +16.7 pp

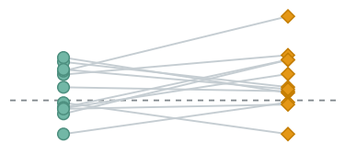

Broad family geometry shift

uncapped p25

V/F target-margin shifts

paired families; V-F unresolved

V F

Social contrast
S - AO relative margin

Cross-model transport

Qwen-FC	+2.08
Llama	+1.39

5 Controlled diagnosis

fixed-trace replay

U-source

uncapped p25

broad shift **+2.08 logits**

P-source

uncapped p25

broad shift **+0.70 logits**

0 / 192 paired argmax flips

Continuous shift survives
a fixed visible trace

SHIFTED GEOMETRY
STABLE ARGMAX
